8. Expected AI Bulk Uploader Behaviour

Check	Expected result
Master recruitment	Create one master recruitment, not 40 unrelated jobs.
Total vacancies	40
Department detection	8 departments
Post detection	Professor, Additional Professor, Associate Professor, Assistant Professor
Category detection	EWS, UR, OBC, SC, ST
Sub-speciality detection	10 explicitly listed sub-speciality rows
Duplicate detection	Uploading this exact PDF twice should be detected using the PDF fingerprint/hash.
Admin review	All extracted rows should remain editable and unpublished until explicitly approved.
Bulk publish	Only approved vacancy records should be published.
Export	Vacancy records should be exportable as CSV/XLSX/JSON.

This PDF intentionally contains both human-readable tables and parser-friendly text rows. It can be used to test PDF text extraction, structured AI extraction, vacancy validation, admin review, duplicate detection, bulk operations, searchability and export without relying on a real recruitment notice.
